

ARE YOU A MOVING TARGET?

We all carry our data around on many different devices. Cybercriminals are after your smart phone, tablet, laptop or USB stick in your pocket. These mobile devices could give them access to sensitive information or be a carrier to distribute malware. They also assume that mobile devices are not adequately protected or that we are less security savvy on them, when compared to desktop PCs. Prove them wrong by doing the following:

Keep your mobile devices safe:

- Apply a passcode or Touch ID to enable encryption
- Scan it for viruses and malicious software or apps
- Keep all apps and operating system up to date
- Delete apps you no longer use
- Don't trust unexpected texts or notifications

BE A HERO

Stop cybercrime in its tracks!

Take part in our Cyber Hero Training. Watch a short video 'Mobile Mayhem' Answer 5 easy questions.

Did you know?

USB devices are still one of the most common causes of malware infections

U

Understand the risk of virus distribution

S

Scan USBs with antivirus before using them

B

Beware of copying sensitive information

Lost a device?

- Report it to IT immediately
- Change your network password
- Remote wipe it
